MEADOWLARK ATRIUM AND VISITOR CENTER VIENNA, VA

Design and construction of both the conservatory and visitor center buildings as well as other site structures in Meadowlark Gardens Park.

The Visitor Center is a one level building that is approximately 4,500 square feet with a 1,500 square foot mezzanine. Construction is primarily wood framed with wood I rafters and laminated veneer lumber beams. A large masonry chimney and brick arches for the entries add to the design aspect of the structure.

The Conservatory Building is approximately 13,000 square feet and incorporates an indoor stream which ends in a fountain and a 2,000 square foot skylight.

Also designed were several site structures including several gazebos.

The location is considered one of the top places in the Washington, DC area to hold an event.
