SAINT JOSEPH MERCY HOSPITAL—ADDITION ANN ARBOR, MI

The project consists of an eleven story East Patient Critical Care Tower Addition to the Ann Arbor campus of Saint Joseph Mercy Hospital. The building also includes one story below entry grade and a penthouse. The building is constructed using structural steel. Patient rooms in the East Tower increased in size from 153 SF to 308 SF each. Site conditions were difficult because the project was constructed in the middle of a courtyard with extremely tight site constraints. Many precautions were required to minimize dust,

vibration and noise because the project was constructed while the remainder of the hospital was in use.
